

# Connect Your People

Formotus puts mobile phones to work for the enterprise by delivering powerful custom business applications from the cloud. Companies can easily connect mobile workers directly to live business data on SharePoint or in other back-end systems. Design once, deploy anywhere with Formotus cross-platform mobile business apps.

**Create** mobile business applications quickly without writing a line of code

- Design intelligent business forms visually using Microsoft Office
- Run the same form as an app on both Android and Windows phones
- Use no browser – native apps optimized for offline productivity

**Connect** mobile workers to SharePoint, data and workflows

- Submit data from the field or retrieve information from HQ
- Connect with SharePoint or any system exposed as a Web service
- Think of it as InfoPath for mobile devices, with no server install needed

**Control** the mobile app lifecycle and mobile user access to your apps

- Deploy apps over the air from the cloud with no IT expertise
- Push updates immediately for agile response to changing conditions
- Audit usage reports, disable users and remove apps from phones remotely

Ours is the only mobile solution that is:

**Wireless** – Everything is installed over-the-air and managed from the cloud

**Browserless** – These rich native apps are not browser-based so they work offline too

**Serverless** – Phones connect directly to SharePoint, with nothing server-side to install

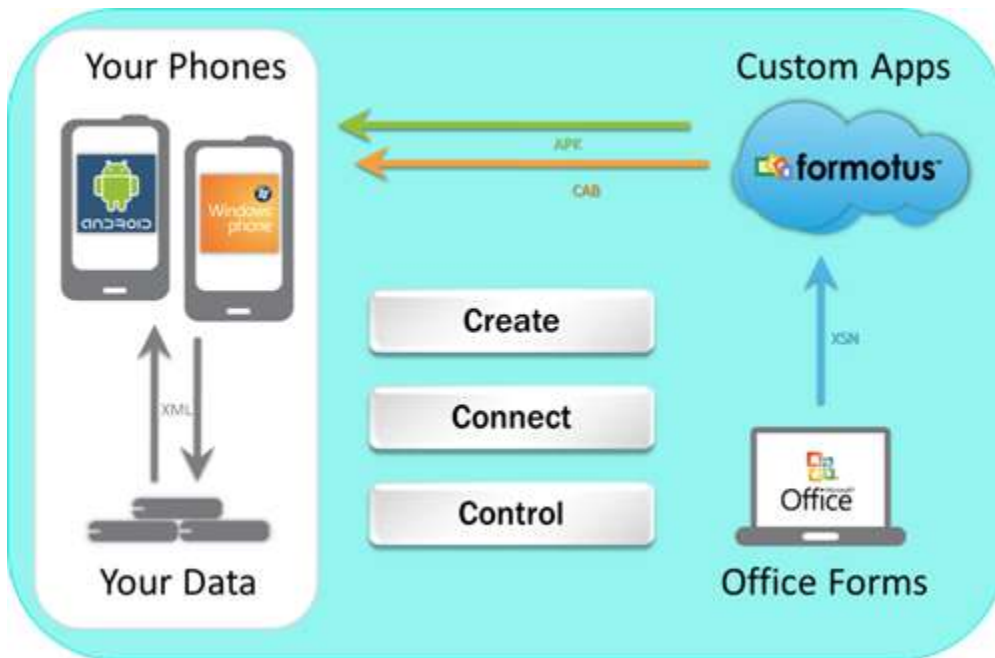

## DESIGN ONCE CONNECT ANYONE

Formotus extends office workflows to people in the field for online and offline productivity using business forms that work across platforms.

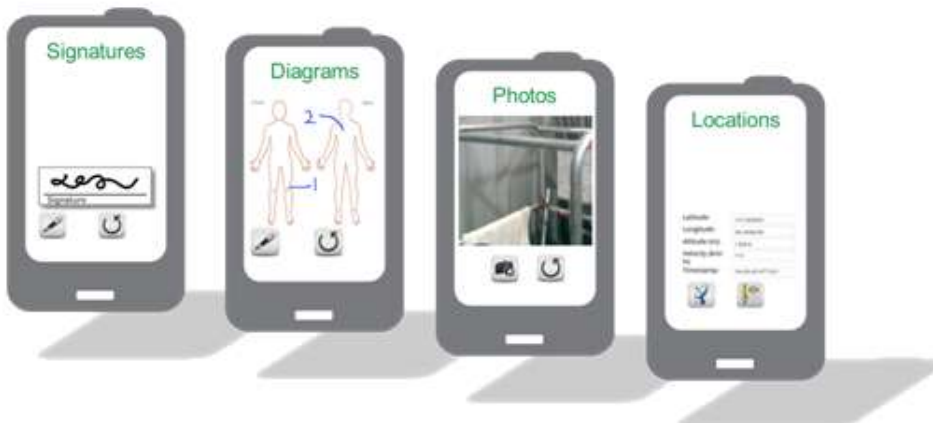

## Rapid Cross-Platform Design and Delivery

Formotus delivers custom mobile business apps that connect Android and Windows phones to SharePoint. Without installing any server software, companies can deploy custom solutions over-the-air for field service, inspections, dispatching, inventory, delivery, or mobile workforce automation of any kind. Formotus forms are browserless, rich native applications that work well offline for data collection – including signature capture, photos and GPS – and connect online to submit or receive live business data. Design cross-platform mobile applications once in InfoPath, and deploy them anywhere from the cloud as XML-based Formotus apps.

- Formotus does not host your data but connects you to it
- The same form runs natively across platforms
- Every form is unique and custom to your needs

## The Best Data Collection Apps, Anywhere

Formotus extends InfoPath capabilities with custom controls that capture signatures, diagrams, photos, GPS locations, and more.

### Better than Browser-based Forms
